Statement of Objective

▶ Implement an algorithm to select the best players for the userdefined formation and improve squad structure through a comprehensive study of the PES soccer data sets and improve the various decision-making stages of football.

Overview:

- ▶ Pro Evolution Soccer (PES)- Series of Football Simulation Video Game.
- ▶ PES Players 2020
 - Player s Demographics
 - Attacker and Midfielder Attributes
 - Defender and Goalkeeper Attributes
 - Player Ranking Position wise

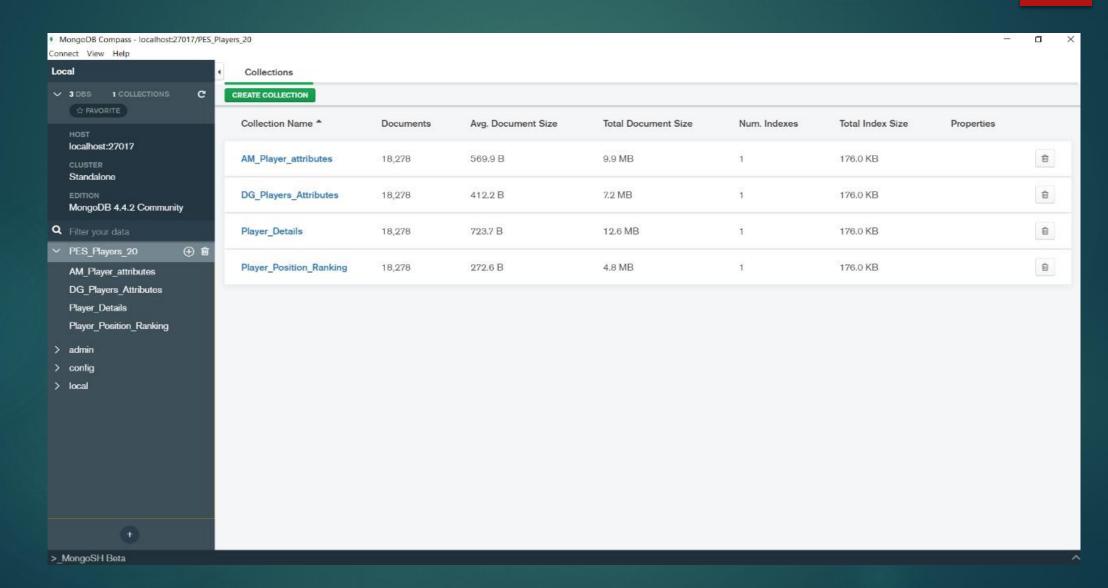

Methodology:

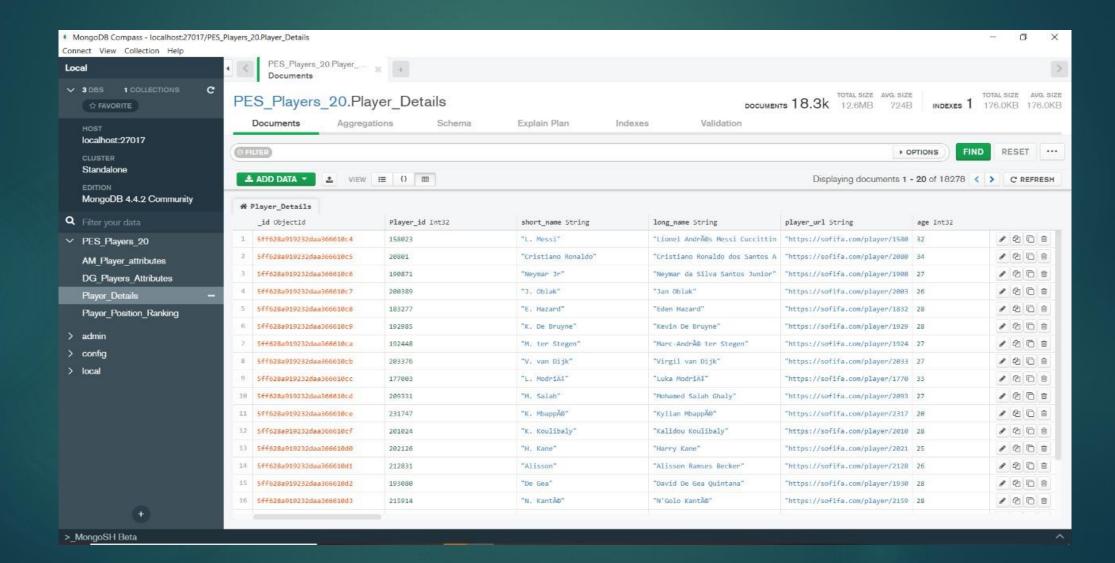

Semi Structured Dataset Programmatically Stored in Mongo DB

- Database (PES_Players_20) created in MongoDB using Python Programming
- JSON Files loaded as collections in the created database using Python with below mentioned names.
 - Players Demographics Player_Details
 - Attacker and Midfielder Attributes AM_Players_attributes
 - Defender and Goalkeeper Attributes DG_Players_Attributes
 - Player Ranking Position wise Player_Position_Ranking
- All the collections are having a common attribute "Player_ID"

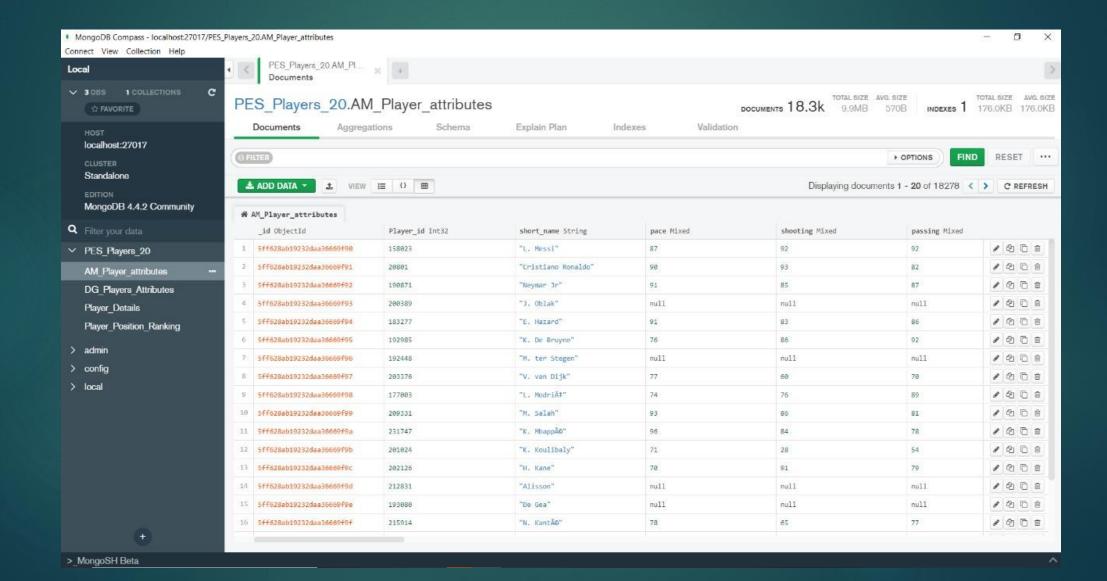

Database Structure

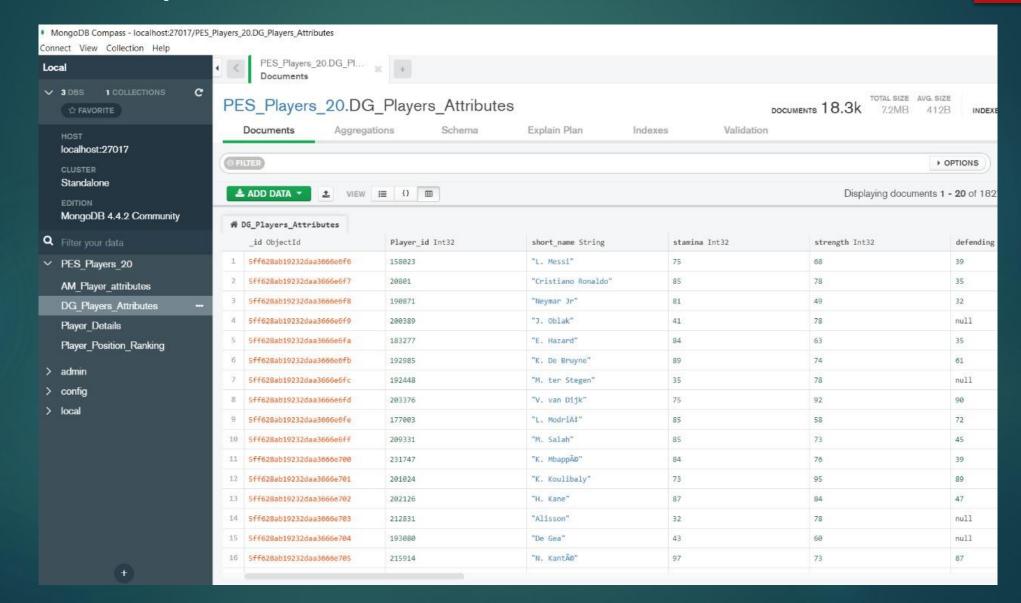

Player_Details

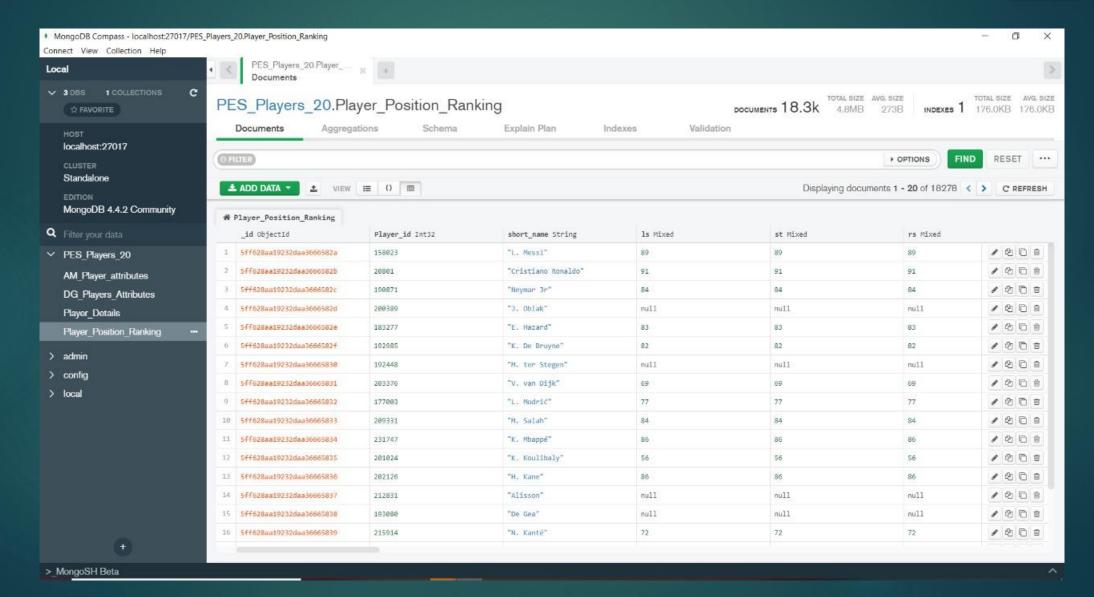

AM_Players_attributes

DG_Players_Attributes

Player_Position_Ranking

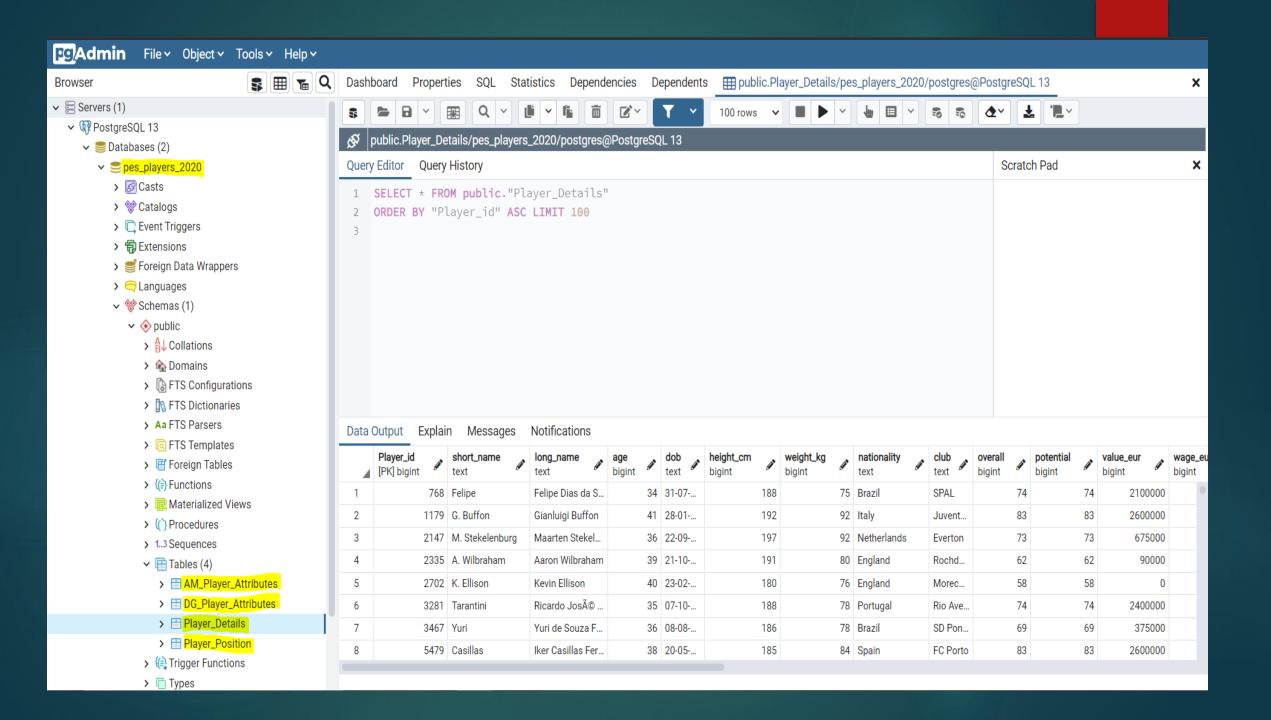

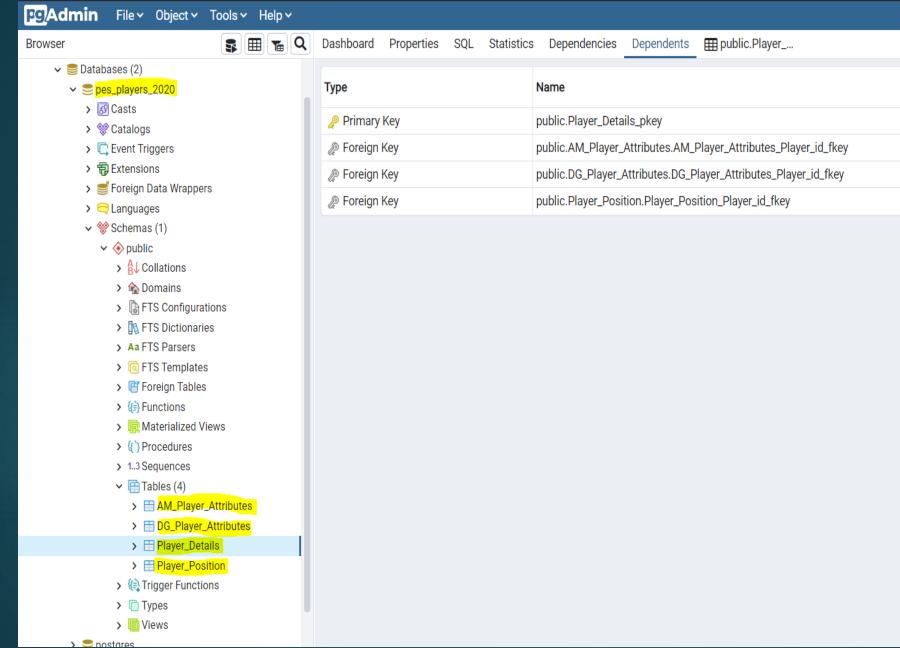

Data Pre-Processing:

- Removed insignificant columns from all datasets like Id, Player Tags, Team Jersey Number, Player URL, etc.
- Handling Missing Data
 - Removed Nation Jersey Number column as it had 90% Null Values as many players just play for clubs and do not play for their nations.
 - Replaced null values with zero wherever player not eligible for that specific attribute. For example, Gk Speed Column attribute determines speed for goalkeepers and hence Players other than Goalkeepers will not have value assigned to this.
 - Imputed null values using mean value of the column Release Clause Euro.

Structured Data storage in PostgreSQL

- Pre processed structured data stored in the postreSQL using Python with below mentioned table names.
 - Players Demographics Player_Details
 - Attacker and Midfielder Attributes AM_Players_attributes
 - Defender and Goalkeeper Attributes DG_Players_Attributes
 - Player Ranking Position wise Player_Position_Ranking
